HEATING   COOLING   WATER HEATING

Integration

Rheem Smart Connect Water Heater Switch work on same platform as the Rheem air conditioners control platform allowing user to control both air conditioners and water heaters through same application bringing more comfort and ease-of-use to the user.

Smart Wi-Fi Control

Through the mobile application, the user can schedule the operation of the water heater with ease. Inching, Voice Control, and Geo-Fencing are other features of this platform.
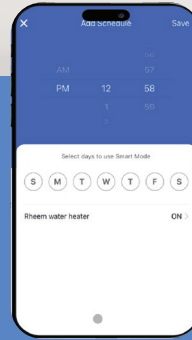

Multiple Options

Rheem Smart Connect Water Heater 30-Amps Switch RSWH30 comes in three different colors of White, Black, and Gold matching with different interior backgrounds.
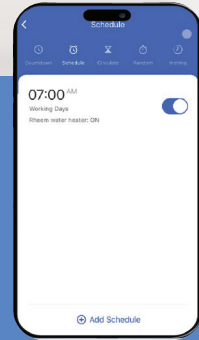

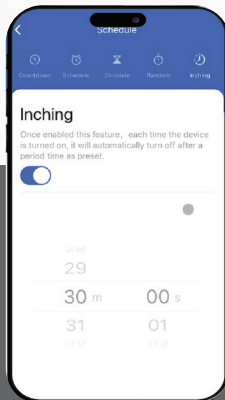

HEATING   COOLING   WATER HEATING

Scheduling

The application allows users to schedule timings for operation of the water heaters that it is compatible with. Multiple water heaters operations can be scheduled through the same application.

Scheduling can be made for specific hour and day

Multiple scheduling plans can work simultaneously

Inching

Inching is another feature of the smart switch which allows the user to set a timer which can turn the water heater off automatically after a certain set period of time. This is an important feature which can help in stopping water heater from working at times where it deemed to be unnecessary.

Inching is a scheduling option which automatically turns off the device after a set time.

Geo-Fencing

Based on arrival or departure of the user from a specific defined location on the map, automation scenarios for air conditioners and water heaters can be planned.

User is able to select automation task based on arriving or leaving a specific location.

The proximity and exact location is selected by user

HEATING • COOLING • WATER HEATING
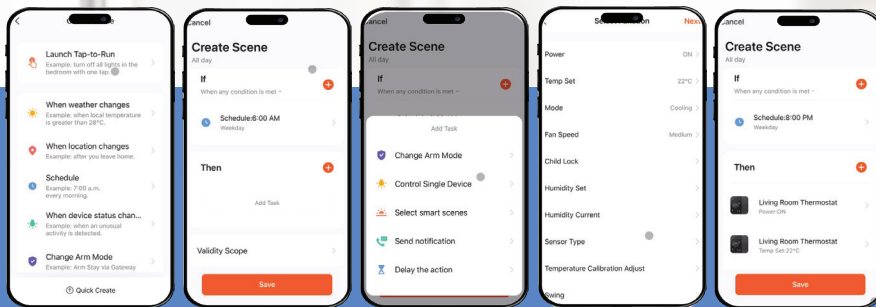

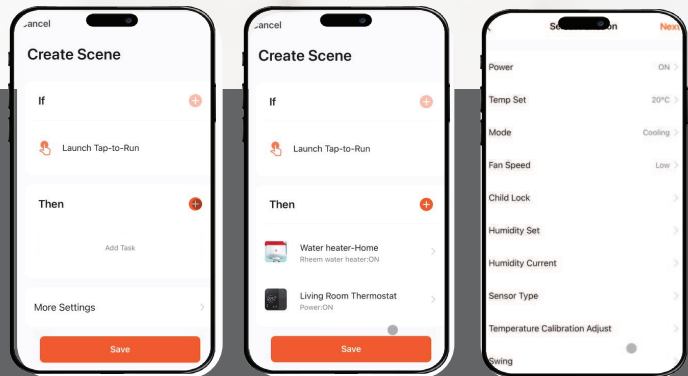

Voice Control

The control platform can be commanded via in-built voice control feature. Also, it is compatible with Google voice command services and Amazon Alexa.

Tap-To-Run

With help of this feature, with single press of a button the user can instantly turn on/off a group of air conditioners and water heaters with different parameters settings.

Automation

Ability to automate tasks based on different scenarios is one of the most important features of the application. This feature allows user to create if-then cases for different scenarios.

If-Then scenario creation for task automation

Multiple if-then scenarios available for user to select from

Multiple features of the unit can be automated while creating the scenario
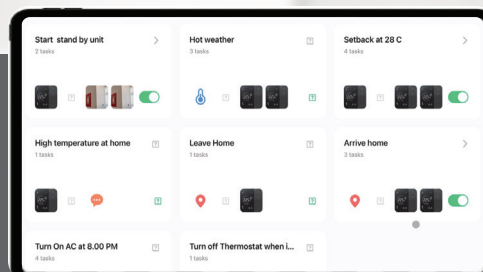

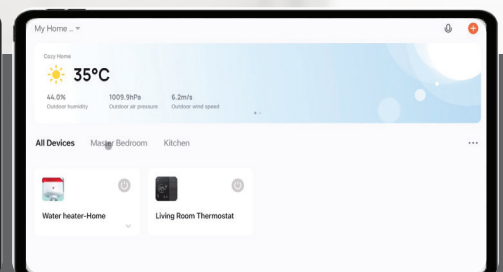

The automation can work for group of air-conditioners and water heaters

User Friendly Platform

The UX/UI is designed in a user-friendly manner making it a simple to use platform for everyone.

Different automation tasks can be seen from one single page.

Easy to navigate home page.

HEATING · COOLING · WATER HEATING
